

PROJECT

Art is already used in some treatment activities in the San Vittore prison. However, there is a lack of spaces to practice them and few possibilities of describing the results and sharing them with the internal and external community. ART-Link wants to make the artistic space already activated with the ReverseLab pilot experience a place practiced continuously, actively involving the people who already work in the prison. It also wants to create the conditions for San Vittore to be recognized as a place of production and enjoyment of contemporary art, collaborating with subjects active in the artistic sector.
