PROVIDED the financial availability,

Article 1 - Scope of the contract

A public selection is hereby organized to grant n° 1 temporary research fellowship to grant research activity, on a fixed-term basis:

Department: Department of Electronics, Information and Bioengineering

Location: DIPARTIMENTO DI ELETTRONICA, INFORMAZIONE E BIOINGEGNERIA

Area: 09 - Industrial and Information Engineering

Academic Discipline: ING-INF/07 - ELECTRICAL AND ELECTRONIC MEASUREMENT

Duration of the contract (months): 12

Expected start date of activity: 16 november 2018

Article 2 - Research Programme

Research Title (and research sub-programme):

Identification and experimental validation of non-linear frequency-domain models.
Frequency characterization of measurement transformers

Research programme description:

Many electrical devices are supposed to be linear but actually they feature a certain degree of non-linearity. This implies a definitional uncertainty, which is not always negligible for some applications. A better definition and a proper modeling of their behavior, taking into account also non-linearity, leads to improve the overall results. The research is aimed to extend these techniques to instrument transformers for voltage and current measurement as well as power electronics converters, considering also three-phase devices. Particular attention should be paid to the quantification of the effects due to the measurement uncertainties on the robustness of the model. Finally, the development of a deep experimental activity is required.

Starting and implementation of the research programme:

The work will take place mainly at the Dipartimento di Elettronica, Informazione e Bioingegneria, and in particular in the laboratories of the Electrical Engineering Research Area. Short missions (one or two days) at other laboratories of Italian research centers may be requested.

Activities that the Temporary Research Fellow will carry out, obligations of the Temporary Research Fellow and conditions :

The Research assistant's task is to study and improve some identification techniques already developed by our research group and to develop identification and modeling programs in the Matlab environment. Besides, a dedicated laboratory activity is requested, including the development of test setups, the execution of tests and the processing of measurement results.

Countries and structures in which the research activity can be carried out:

ITALY
