## **Article 2 - Research Programme**

### **Research Title (and research sub-programme):**

DILEMMA (Imaging/Modeling/Monitoring/And/Design/of/Earthen/Levees)  
Development and calibration of electrical tomography for levee monitoring

### **Research programme description:**

The objective is to demonstrate the effectiveness of ERT (Electrical Resistivity Tomography) as a monitoring method of levee saturation, seepage phenomena and failure risk. Prototype systems installed on the pilot sites of the project will send ERT data on a daily base. The researcher will be responsible of data analysis and interpretation. He will develop the methodology for data filtering, corrections and inversion. He will also develop the methodology for calibrating the resistivity data in order to obtain quantitative measurements of water content.

### **Starting and implementation of the research programme:**

The researcher is expected to test different inversion methods (including simultaneous inversion of time-lapse data, constrained inversion methods, etc.) in order to define the most effective and reliable approach. Data might be affected by artefacts related to the 3D geometry of the levee structure and to the depth and size of the electrodes. Analytical and modelling methods will be used to study these effects and to introduce proper corrections to remove the artefacts. Inverted resistivity data and hydraulic/geotechnical parameters measured at the pilot sites will be compared in order to extract empirical or mathematical/physical equations to relate resistivity with soil water content.

### **Activities that the Temporary Research Fellow will carry out, obligations of the Temporary Research Fellow and conditions :**

The activity of the researcher will consist of data processing, data interpretation, data modelling, algorithm development, analytical studies, data calibration with laboratory measurements, laboratory test on small-scale specimens, reporting, paper writing, result presentations at meetings and conferences.
